

SAVINGS BY THE MINUTE

Unparallel Activity & Productivity Tracking

With Control Module Industries' Clock in the Box application, time clock management is easier than ever before. Designed with an easy-to-use interface and customizable configurations, Clock in a Box tracks employee time punches, manages time settings and generates sophisticated reports – providing immediate access to an array of human resource data.

Clock in a Box provides managers with extremely flexible information tracking, offering data recording tools that can be customized to your business's needs. The Clock in a Box application automatically collects labor and resource data, generating informative reports including: attendance; overtime; schedules; and payroll. Reports can be categorized by employee, by department or viewed for the entire organization.

Data collection also monitors statistics such as overtime occurrences, vacation time and individual employee activity – providing immediate insight into staff patterns and employee status.

One of Clock in the Box's most informative features is its ability to record identifying time clock punches and group punch data by pay codes. These codes can be assigned pay rates for specific activities, which can be linked to accounting software, providing valuable information on productivity and profitability.

Providing unmatched labor tracking right "out of the box," Clock in a Box allows management to accurately, effectively and efficiently monitor human resources activity.

Clock in a Box® is a registered trademark of Control Module, Inc.

Clock in a Box Benefits

The ultimate human resource management tool, Clock in a Box links staff activity, labor performance and departmental costs to existing accounting software allowing for integrated productivity reporting. Clock in a Box's benefits include:

- Easy-to-use and understand interface.
- Easy to customize and configure.
- Capable of integrating with a wide variety of accounting software.
- Complete clock control.
- Customizable pay codes.
- Automated data collection.
- Advanced reporting.
- Extensible for future growth.
